

Flo N Spout Extender Assembly Instructions

1. Push the Flow Tube on to the Flo N Spout Extender (see fig 1).
2. Insert the Breathe Tube through the 1/4" hole in the base of the Spout Extender (see fig 2) until the Breathe Tube is 1/4" longer than the Dust Cap Attachment at the tip of the Flow Tube (see fig3).
3. Screw the Spout Extender on to the container. The Breathe Tube should reach the bottom of the container (see fig 4). The tube can be trimmed to the proper length.
4. Properly secure the Spout Extender to the container. As you begin to pour, an air pocket will form at the bottom of the container. After a few seconds, the Breathe Tube will pierce the air pocket creating a smooth, quick and consistent pour.
